```
The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid angiopathy, particularly Alzheimer's disease, hereditary cerebral haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU11649-AAU11669, AAU11911) that were used in the invention as a carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor was used in the invention to treat a disease state characterised by cerebral amyloid angiopathy (CAA)
The present invention relates to a new method of inhibiting cerebral amyloid anglopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid anglopathy, particularly Alzheimer's disease, hereditary cerebral haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAUI1648-AAUI19169, AAUI1911) that were used in the invention as a carrier for the amyloid beta40 (Abeta40) inhibitor. The Abeta40 inhibitor cerebral amyloid angiopathy (CAA)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid haemorrhage for treating disease states characterised by cerebral amyloid haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU1669, AAU1910 & AAU1911) that were used in the invention as a was used in the invention to treat a disease state characterised by cerebral amyloid angiopathy (CAA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40 inhibitor.
                                                                                                                                                                                                                                                                                                                                        Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                                                                                                                                                                                                                            Peptide #19, used as carrier for the amyloid-beta40 (Abeta40) inhibitor.
                                                                   Gaps
                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Similarity 100.0%; Score 29; DB 5; Length 7; Similarity 100.0%; Pred. The invention relates to a peptide (I) inhibiting fibrillogenesis, that comprises a beta-strand with two faces, where the first face has hydrogen bonds, and the second face blocks or disrupts propagation of hydrogen bonds, and the second face blocks or disrupts propagation of hydrogen bonding between beta-strands needed to form fibrils. (I) is useful for inhibiting fibrillogenesis, for detecting fibrils in a subject and for screening candidate fibrillogenesis inhibitors. A pharmaceutical composition comprising (I) is useful for inhibiting or disassenbling fibrils associated with pathological states such as Alzheimer's disease, composition comprising (I) is useful for inhibiting or disassenbling fibrils associated with pathological states such as Alzheimer's disease, creative amyloidosis, familial Mediterranean fever, familial amyloid polyneuropathy, familial amyloid cardiomyopathy, isolated cardiac amyloid, systemic senile amyloidosis, adult onset diabetes, insulian amyloidosis, hereditary cerebral haemorrhage with amyloidosis, familial amyloidotic polyneuropathy, scrapis, creations of the thyroid, familial amyloidotic polyneuropathy, scrapis, creations of the sponsificarm encephalist, principle.
                                                                                                                                                                 Abeta; beta-amyloid; fibrillogenesis; fibril; nootropic; neuroprotective; cerebroprotective; haemostatic; antipyretic; nephrotropic; vasotropic; dermatchogical; auditory; antidiabetic; cytostatic; antiinflammatory; antimitorobial; anticonvy; antidiabetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel peptide for inhibiting fibrillogenesis, and for screening fibrillogenesis inhibitors, has beta-strand with one face having hydrogen bonds and other face blocking propagation of hydrogen bonding between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              mediated diseases, or Huntington's disease. (I) is useful for treating diseases associated with fibrillogenesis or for treating and/or diagnosing a subject which is a mammal, preferably human, having protein aggregation disease or protein misfolding disease. The composition is useful in both preventive and curative therapies of fibril based pathologies mentioned above. The present sequence represents a peptide which can comprise consecutive N-methylation, but is a weak inhibitor of Abeta
                                                                                                                                                                                                                                                                                                                                                                    3. .6
/note= "can be methylated; both the methylated and non-methylated versions of this peptide are poor
fibrillogenesis inhibitor"
                                                                                                                    Abeta fibrillogenesis inhibitor peptide Abeta16-22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /note= "C-terminal CONH2"
                                                                                                                                                                                                                                                                                                                                           Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Page 7; 151pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method for prevention and/or treatment of an anyloid-related disease which comprises administration of an all-D amyloid-beta peptide. The method is used for preventing and/or treating candyloid-beta mayloid related disease e.g. cerebral amyloid angiopathy; for altering serum levels of amyloid-beta in a mammal and reducing or inhibiting the formation of plaques. It is the mammal; and reducing or inhibiting the formation of plaques. It is the mammal and reducing or inhibiting the formation of plaques. It is the also used for treating AA (reactive) amyloid diseases including inflammatory disease e.g. rheumatoid arthritis, juvenile chronic arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy, arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy, disease. AA deposits are also produced as a result of chronic microbial disease. AA deposits are also produced as a result of chronic microbial checking (preferably leprosy, tuberculosis, bronchiectasis, decubitus culcers, chronic pyelonephritis, osteomyelitis and Whipple's disease).

Certain malignant neoplasms can also result in AA fibril amyloid deposits including Hodgkin's lymphoma, renal carcinoma and hairy cell leukaemia. The

The invention relates to a method for prevention and/or treatment of an amyloid-related disease which comprises administration of an all-D amyloid-beta peptide. The method is used for preventing and/or treating Alzheimer's and other amyloid related disease e.g. cerebral amyloid alzenier's and other amyloid related disease e.g. cerebral amyloid carpotathy; for altering serum levels of amyloid-beta in a mammal and cavours the clearance of soluble amyloid-beta or fibril amyloid-beta from the mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including inflammatory diseases e.g. rheumatoid arthritis, juvenile chronic arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy.

Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's disease. AA deposits are also produced as a result of chronic microbial infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus) ulcers, chronic pyelonephritis, osteomyelitis and Whipple's disease).
                                                                                                                                                           ö

The method is used for preventing and/or treating amyloid-beta peptide. The method is used for preventing and/or treating Albatamer's and other amyloid related disease e.g. cerebral amyloid angiogathy; for altering serum levels of amyloid-beta in a mammal and favours the clearance of soluble amyloid-beta or fibril amyloid-beta from the mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy, Reiter's syndrome, Adult Still's disease, Bechet's syndrome and crohn's disease. AA deposits are also produced as a result of chronic microbial infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus
Certain malignant neoplasms can also result in AA fibril amyloid deposits including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The present sequence is an Abeta peptide used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cerebral amyloid angiopathy; amyloid disease; ankylosing spondylitis; psoriasis; Reiter's syndrome; Adult Still's disease; Bechet's syndrome; Crohn's disease; infection; leprosy; tuberculosis; carcinoma; nootropic; chronic pyelonephritis; ostcomyelltis; Whipple's disease; vasotropic; Hodgkin's lymphoma; neuroprotective; bronchiectasis; ophthalmological; ulcer; antiinflammatory; cytostatic; uropathic; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a method for prevention and/or treatment of an

The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Aap-Val-Gly ADA89887 or its fragment. Also described: (I) a nucleic acid molecule encoding (I); (2) a vector comprising the nucleic acid of (I); (3) a host cell comprising the host cell comprising the bost cell of (3) under conditions that allow synthesis of (I) and recovering (I) from the culture; (5) a composition comprising or an antibody molecule produced by method (4); (6) a kit comprising (I),
ulcers, chronic pyelonephritis, osteomyelitis and Whipple's disease). Certain malignant neoplasms can also result in AA fibril amyloid deposits including Hodgkin's llymphoma, renal carcinoma, carcinomas of gut, lung and urogenital tract, basal call carcinoma and hairy cell leukaemia. The present sequence is an Abeta peptide used to illustrate the method of the

cc nucleic acid of (1), vector of (2) or host cell of (3); (7) optimising caping the resulting Fab optimised clones; (10) expressing against Abeta4, (9) identifying optimised clones; (10) expressing of selected, optimised clones; (11) preparing a pharmaceutical composition, comprising optimised clones; (11) preparing a pharmaceutical composition prepared by method (8). (1) has continued antibody/antibody molecule with a carrier; and (12) a continued contropic and antibody molecule (1), nucleic and molecule, contropic and antibody molecule (1), nucleic acid molecule, corector or host is useful in preparing a pharmaceutical composition for the prevention and/or treatment of a disease associated with anyloid openesis and/or ramyloid-plaque formation. The antibody molecule composition for the disease mentioned above. The antibody is used for the detection of the disease mentioned above. The antibody is used for the distince anyloid plaques formation in particular, the disease is capinst beta-amyloid plaques for neuropathy, Down's syndrome, caping particle discusse, motor neuropathy, Down's syndrome, contracted damentia, Alzhaimer's disease, motor neuropathy, Down's syndrome, contracted damentia, and accented anyloid sole present the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer; 6 disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antibody molecule capable of specifically recognizing two regions of
the beta-A4 peptide, useful for diagnosing, preventing or treating
diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The present invention describes an antibody molecule (1) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the main of acid sequence Ala-Glu-Phe-Arg-His-App-CC amino acid sequence Val-His-His-Glu-Lys-Leu-Val-Phe-Phe-Ala-Glu-App-Val-Camino acid sequence Comprising the vector comprising the nucleic acid of (1); (3) a host call comprising the vector of (3) under conditions that allow synthesis of culturing the host call of (3) under conditions that allow synthesis of (1) and recovering (1) from the culture; (5) a composition comprising (1), vector of host call of (1); (4) peparing (1); (8) testing the resulting Fab optimisation library by panning of selected, optimised clones; (11) preparing a pharmaceutical composition prepared by method (8): (1), has composition for optimised antibody/antibody molecule with a carrier; and (12) a pharmaceutical composition prepared by method (8): (1) has pharmaceutical composition for the prevention and/or treatment of a disease associated with carrier; and can be used in preparing a pharmaceutical composition for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mention of baca-amyloid plaque formation of the disease mention of alsease, more recordance of the di

                                                                                                                                                                                                                                                                  The present invention describes a method (M1) for controlling self-
assembly of self-assembling peptide-based structures by providing a
controlled environment and placing segments of beta-amyloids in the
controlled environment to generate a self-assembling structure. Also
described: (1) a method (M1a) for controlling self-assembly of peptide-
based structures comprising providing a controlled environment adapted to
redirect a self-assembly process, and generating a self-assembling
peptide-based structure
controlled environment; and (2) a self-assembling peptide in the
controlled environment; and (2) a self-assembling peptide in the
controlled environment; and of (2) a self-assembling peptide amino
controlled environment of segments, optionally with a conservative amino
controlled environment of suseful in controlling the self-assembling peptide
beta-amyloid. The method is useful in controlling the self-assembling peptide
self-assembling peptide-based structures. The self-assembling peptide
controlling the present in mention is used in the
controlling the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                   Controlling self-assembly of peptide-based structures (e.g. nanotubes) comprises providing a controlled environment and placing segments of beta -amyloids in the controlled environment to generate a self-assembling

This invention relates to novel self-aggregating peptides that can be used for the diagnosis and treatment of amyloid-associated diseases.

Specifically, it refers to peptides, and antibodies directed therefore the conformation and characterists, which can prevent or reduce fibril formation and diaggregate formed aggregates by competitive destabilisation.

Conformingly, these compositions can be used directly to inhibit the production of islet amyloid polypeptides (IAPPP) and for the inhibit to production of islet amyloid polypeptides (IAPPP) and for the inhibit to conform the production of islet amyloid polypeptides (IAPPP) and for the inhibit to conform the production of islet amyloidosis. As such they are useful for treating a variety of conformation of islet amyloidosis, hereditary Icelandic syndrome, althoughed myeloma, medullary carcinoma, acrtic medical carcinoma.

Additionally, they can be described as exhibiting activities such as antidiabetic, nootropic, neuroprotective and antiparkinsonian. This antidiabetic, nootropic, neuroprotective and antiparkinsonian. This coptide sequence is a human medin peptide fragment (also known as milk fat globule-EGF factor 8 protein, which is the main constituent of acrtic medial amyloid deposits). This peptide sequence is a human calcitonin-

Conformation of the peptide fragment of the peptide factor of a protein of the peptide factor of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New self-aggregating peptide useful for treating amyloid-associated diseases e.g., Alzheimer's disease, Parkinson's disease, hereditary icelandic syndrome, multiple myeloma, medullary carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 11, Application US/09747408
Patent No. 6670399
GENERAL INFORMATION:
APPLICANT: Green, Allan M.
APPLICANT: Gervais, Francine
TITLE OF INVENTION: Cerebund Andloid Angiopathy
TITLE OF INVENTION: Cerebund Andloid Angiopathy
TITLE REFERENCE: NBI-088
CURRENT APPLICATION NUMBER: US/09/747,408
CURRENT FILING DATE: 2000-12-22
PRIOR APPLICATION NUMBER: 60/171,877
PRIOR APPLICATION NUMBER: 60/171,877
PRIOR PILING DATE: 1999-12-23
NUMBER OF SEQ ID NOS: 24
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                  APPLICANT: Green, Allan M.
APPLICANT: Green, Allan M.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        APPLICANT: Eugene Roberts
TITLE OF INVENTION: Method For Antagonizing
TITLE OF INVENTION: Amnestic Effects of Amyloid n
TITLE OF INVENTION: Protein and Improving the
TITLE OF INVENTION: Quality of Life in Individuals
TITLE OF INVENTION: With Alzheimer Disease

                                                                                                                                                                                                                                                                                                                                                                                                    US-08-617-267C-7

US-08-617-267C-7

Sequence 7, Application US/08617267C

Patent No. 6319408

GENERAL INFORMATION:

APPLICANT: Findeis, Mark A. et al.

APPLICANT: Findeis, Mark A. et al.

TITLE OF INVENTION: Modulators of Amyloid Aggregation

NUMBER OF SEQUENCES: 45

CORDESPONDES: 15 State Street

CITY: Boston

STREET: 28 State Street

COUNTRY: USA

ZIP: 02109-1875

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC-Compatible

OPERATION VOMBER: US/08/617,267C

APPLICATION NUMBER: US/08/617,267C

PTILNG DATE: 14-WAR-1996

PRILNG DATE: 14-WAR-1995

PRILNG DATE: 14-WAR-1995

PRILNG DATE: 14-WAR-1995

Patent No. 5948763

GENERAL INFORMATION:
APPLICANT: SOTO-JARA, Claudio
APPLICANT: BAUMANN, MARC
APPLICANT: BAUMANN, MARC
TITLE OF INVENTION: PEPTIDES AND PHARMACEUTICAL COMPOSITIONS
TITLE OF INVENTION: THEREOF FOR TREATMENT OF DISORDERS OR DISEASES ASSOCIATED
TITLE OF INVENTION: WITH PROTEIN FOLDING INTO AMYLOID-LIKE DEPOSITS
NUMBER OF SEQUENCES: 26
CORRESPONDENCE ADDRESS: ADDRESS: ADDRESS: ADDRESSEE: ADDRE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

Sequence 21, Application US/09724961

Patent No. 6743427

GENERAL INFORMATION:

APPLICANT: Bard, Frederique

APPLICANT: Wasquez, Nicki

APPLICANT: Vendock, Ted

TITLE OF INVENTION: Prevention and Treatment of Amyloidogenic Disease

TITLE OF INVENTION: Prevention

FILE REFERENCE: 15270J-004750UC

CURRENT APPLICATION NUMBER: US/09/724,961

CURRENT APPLICATION NUMBER: US 09/580,015

PRIOR PILING DATE: 2000-05-26

PRIOR FILING DATE: 1999-05-28

PRIOR FILING DATE: 1998-11-30

PRIOR FILING DATE: 1998-11-30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S-09-7,4-901.2
Sequence 22, Application US/09724961
Patent No. 6743427
GENERAL INFORMATION:
APPLICANT: Schenk, Dale B.
APPLICANT: Bard, Frederique
APPLICANT: Yednock, Ted
APPLICANT: Yednock, Ted
TITLE OF INVENTION: Prevention and Treatment of Amyloidogenic Disease
FILE REPERENCE: 15270J-004750UC
CURRENT APPLICATION NUMBER: US/09/724,961
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CTHER INFORMATION: Description of Artificial Sequence:10-mer peptide; OTHER INFORMATION: from AN1792 sequence (human Abeta42, beta-amyloid; OTHER INFORMATION: peptide)

Patent No. 5948763

GENERAL INFORMATION:
APPLICANT: SOTO-JARA, Claudio
APPLICANT: FANGIONE, BLas
TITLE OF INVENTION: THEREOF FOR TREATMENT OF DISORDERS OR DISEASES ASSOCIATED
TITLE OF INVENTION: WITH PROTEIN FOLDING INTO AMYLOID OR AMYLOID-LIKE DEPOSITS
NUMBER OF SEQUENCES: 26
CORRESPONDENCE ADDRESS:
ADDRESSEE: BROWDY AND NEIMARK
                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

Sequence 14, Application US/08766596A
Patent No. 6462171
GENERAL INFORMATION:
APPLICANT: SOTO-JRA, Claudio
APPLICANT: BAUGANN, Marc
APPLICANT: FRANGIONE, Blas
TITLE OF INVENTION: PEPTIDES AND PHARMACEUTICAL
TITLE OF INVENTION: COMPOSITIONS THEREOF FOR TERATMENT OF DISORDERS OR DISEASES
TITLE OF INVENTION: ASSOCIATED WITH PROTEIN FOLDING INTO AMYLOID LIKE
TITLE OF INVENTION: ASSOCIATED WITH PROTEIN FOLDING INTO AMYLOID LIKE
TITLE OF DINVENTION: ASSOCIATED WITH PROTEIN FOLDING INTO AMYLOID LIKE
TITLE OF DINVENTION: ASSOCIATED WITH PROTEIN FOLDING INTO AMYLOID LIKE
TITLE OF DINVENTION: ASSOCIATED WITH PROTEIN FOLDING INTO AMYLOID LIKE
TITLE OF DINVENTION: ASSOCIATED WITH PROTEIN FOLDING INTO AMYLOID LIKE
THE OF DINVENTION: DEPOSITS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

US-08-612-785B-14
Sequence 14, Application US/08612785B
Sequence 14. Patent No. 5854204
GENERAL INFORMATION:
APPLICANT: Findeis, Mark A. et al.
TITLE OF INVENTION: Ab Peptides that Modulate b-Amyloid
TITLE OF INVENTION: Aggregation
TITLE OF SECTION: Aggregation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    COMPUTER READABLE FORM:

Patent No. 5854204
GENERAL INFORMATION:
APPLICANT: Findeis, Mark A. et al.
APPLICANTON: PA Peptides that Modulate b-Amyloid
TITLE OF INVENTION: Aggregation
NUMBER OF SEQUENCES: 40
CORRESPONDENCE ADDRESS:
ADDRESSEE: LAHIVE & COCKFIELD
STREET: 28 State Street, Suite 510
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CITY: Boston

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6713664

GENERAL INFORMATION

APPLICANT: Javorski, Jan G.

APPLICANT: Blacklock, Brenda J.

TITLE OF INVENTION: FATTY ACID ELONGASE 3-KETOACYL COA

TITLE OF INVENTION: FATTY ACID ELONGASE 3-KETOACYL COA

TITLE OF INVENTION: SYMTHASE POLYPEPTIDES

FILE REFERENCE: 07148-108001

CURRENT APPLICATION NUMBER: US 60/210,326

PRIOR FILING DATE: 2001-06-08

NUMBER: OF SEQ ID NOS: 56

SOSTWARE: FRASERO for Windows Version 4.0
                          APPLICANT: Blacklock, Brenda J.

Sequence 2, Application US/08704711A

Patent No. 6114159

GENERAL INFORMATION:

APPLICANT: WILL, HOTER

APPLICANT: WILL, HOTER

TITLE OF INVENTION: METALLOPROTEASES, THEIR PRODUCTION AND USE

NUMBER OF SEQUENCES: 22

CORRESPONDENCE ADDRESS:

ADDRESSES: 3000 K Street, N.W., Suite 500

CITY: Washington

STREET: 0.C.

COUNTRY: USA

COUNTRY: USA

COUNTRY: BEADABLE FORM:

MEDIUM TYPE: Floppy disk

COUNTRY: APPLICATION DATA:

APPLICATION NUMBER: US/08/704,711A

FILING DATE: 20-NOV-1996

CLASSIFTCATION DATA:

APPLICATION NUMBER: WO PCT/DE95/00357

FILING DATE: 17-WAR-1995

RIOR APPLICATION DATA:

APPLICATION NUMBER: DE 4403663.1

FILING DATE: 10-CT-1994

FILING DATE: 11-WAR-1995

RIOR APPLICATION DATA:

APPLICATION NUMBER: DE 4403663.1

FILING DATE: 21-CT-1994

ATTORNEY/ARCHINER: 31-CT-1994

RETERENCE/DOCKET NUMBER: BE 4403663.1

FILING DATE: 17-WAR-1995

REGISTRATION NUMBER: BE 400563.1

Patent No. 6703491

GENERAL INFORMATION:

APPLICANT: Homburger et al.

TITLE OF INVENTION:

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster

FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 52308

Patent No. 6703491

GENERAL INFORMATION:
APPLICANT: Homburs et al.
APPLICANT: Homburs et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094
CURRENT PAPLICATION NUMBER: US/09/270,767
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 60733
LENGTH: 84
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

Patent No. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 33463
LENGTH: 201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-09-270-767-48680

Sequence 13, Application US/09747408

Patent No. 6670399

GENERAL INFORMATION:

APPLICANT: Gervais, Francine

TITLE OF INVENTION: Compounds And Methods For Modulating

TITLE OF INVENTION: Cerebral Amyloid Angiopathy

FILE REFERENCE: NBI-088

TITLE OF INVENTION: Carboal Amyloid Angiopathy

FILE REFERENCE: NBI-088

CURRENT FELING DATE: 2000-12-22

PRIOR APPLICATION NUMBER: 60/171,877

PRIOR APPLICATION NUMBER: 60/171,877

PRIOR FILING DATE: 1999-12-23

NUMBER OF SEQ ID NOS: 24

SOFTWARE: FaatSEQ for Windows Version 4.0

SEQ ID NO 13

Patent No. 6313265
GENERAL INFORMATION:
APPLICANT: Phillips, Greg
APPLICANT: Crossin, Kathryn L.
TITLE OF INVENTION: NEURITE OUTGROWTH-PROMOTING POLYPEPTIDES
TITLE OF INVENTION: CONTAINING FIBRONECTIN TYPE III REPEATS AND METHODS OF USE
NUMBER OF SEQUENCES: 77
CORRESPONDENCE ADDRESS:

Patent No. 6747137
GENERAL INFORMATION:
APPLICANT: Keith Weinstock et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICANU
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        US-09-673-395A-467

US-09-673-395A-467

US-09-673-395A-467

Sequence 467, Application US/09673395A

Patent No. 6620923

GENERAL INFORMATION:
APPLICANT: SPECHY, THOMAS

APPLICANT: SPECHY, THOMAS

APPLICANT: BLARSY, CHRISTIAN
APPLICANT: PILARSY, CHRISTIAN
APPLICANT: DAHL, EDGAR

TITLE OF INVENTION: HUMAN NUCLEIC ACID SEQUENCES FROM UTERUS TUMOR TISSUE
TITLE OF INVENTION: HUMAN NUCLEIC ACID
FILE REFERENCE: ALBRE-12

CURRENT FILING DATE: 2000-10-17

NUMBER OF SEQ ID NOS: 637

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 467

LENGTH: 41
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                        /note= "Wherein "Xaa" at position

#22 corresponds to "2" in the specification, and is
#22 a chain of from 1 to 20 amino acid residues
or a carboxy-terminal group."
                                                                                                                                                                                                                                                   /note= "Wherein "Xaa" at position

Sequence 7876, Application US/09543681A

Patent No. 6605709

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABIJ
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS

TITLE REFERENCE: 2709.1002-001

CURRENT APPLICATION NUMBER: US/09/543,681A

CURRENT PILLING DATE: 2000-04-05
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                      GENERAL INFORMATION:
